

Going Green With Your Home's Electric

As technology advances and our world becomes increasingly aware of our resources, the world of home improvement also grows and changes. Now, many companies and even homeowners are growing to understand that small steps are the best way for us to all reduce our carbon footprint and care for future generations of our families.

In the past, choosing the more environmentally-aware options in home improvement usually meant selecting an unknown company's products, a wildly more expensive material cost, a lesser quality product - or at worst, all three at the same time. **Luckily - That's not the case anymore.**

Going green is now easier than ever! More efficient bulbs are just the first step. Aside from modern appliances that use less energy, there are simple steps you can take to reduce your energy usage - which also means saving money every month.

DONT FORGET TO WEAR YOUR GREEN! HAPPY SAINT PATRICK'S DAY

Don't forget to wear something green on Saint Patrick's Day - Wednesday, March 17 - Why did this tradition come about? Irish folklore suggests that leprechauns will pinch anyone they find. It is said that wearing green makes you invisible to leprechauns, so adding a bit of green to your outfit keeps you safe!

Green Is The Color Of The Cash You'll Save

Aside from the benefits to the environment, correctly implemented electricity conservation tips and tricks can also save you on your energy bills monthly. You've got options for going green.

- **Small Steps To Reduce Energy Consumption** - You don't need to jump to big ticket items like solar panels right away to reduce your carbon footprint. Take small steps like setting lights on timers or using smart switches can add up to energy savings over time.
- **Ceiling Fans For Targeted Room Comfort** - You may not need your HVAC system running as hard at certain times of the day. If you add a ceiling fan in your bedroom, you can adjust your comfort systems for less usage in the overnight hours and rely on your ceiling fan for additional comfort in the room you're in. Ceiling fans are an easy upgrade.
- **LED Lightbulbs and Fixtures For Less Energy Waste** - Conventional lightbulbs waste a good portion of the energy spent to power the bulb by generating heat while producing light. LED bulbs can save over 80% on energy compared to traditional bulbs, and have a much longer lifespan.

Superior Service Electric is here for all of your electrical system needs. Contact us [online](#) or call us at (205) 433-4022.
