

## Sustainable, Eco-Friendly Homes Start With Small Steps At Home

This week, we celebrated Earth Day. We work hard to help our clients to care for their properties while keeping Mother Nature in mind.

We work hard to keep your home on the up-and-up, working hard to help you keep your property at its best while being mindful of our resources and maintaining environmentally friendly business practices.

Energy efficiency and electrical safety go hand-in-hand. We want to make sure your household and your family are well-protected and as efficient as possible.

## Get To Know Our Technicians: Introducing Noah

*"I became a part of Superior Service Electric in 2021, following two years of dedicated training at a trade school. Beyond my professional pursuits, I relish the great outdoors and cherish moments spent connecting over sports with my loved ones."*

- Noah Foster, Electrician at Superior Service Electric

## Do Your Part To Care For Your Home & The Earth

We're not saying you have to start making your own soap or sewing your own clothing. You can take little steps to do your part to help the world as a whole while also helping keep your home in check.

- **Getting Into Your Recycling & Proper Disposal Groove** - It takes just a few minutes on your end, but it can make a world of difference. Knowing what should (and should not!) go into your recycling, how to properly dispose of appliances or household chemicals, and opting out of junk mail lists can all help you to better care for your world with minimal impact to your day.
- **Consider Smart Power Strips** - While turning off TVs when they are not in use is great, most people don't know that those devices may still be drawing "standby" energy - so that they can be turned on quickly when you want to watch again. Instead of unplugging every time you're done watching, consider a smart power strip or smart outlet to completely shut off power when your television is not actively in use.
- **Considering Your Biggest Energy Wasters When Upgrading** - Aside from TVs, appliances and light sources can be big contributors to your electrical costs. When you do need to upgrade, consider the more energy efficient appliance options and lighting styles. While the initial replacement may cost more, you'll save in the long run. *We're more than happy to help with any lighting upgrades or electrical service updates you may need!*

Superior Service Electric is here for all of your electrical system needs. Contact us [online](#) or call us at (205) 433-4022.
